ABSTRACT

As the name suggests, real estate is the business that are done by the people dealing with the properties. Real Estate is one of the trending fields in today's world. Property is one of the essential factors that each and everyone want to own. The property may refer to the houses. It can be also given for rent or lease or kept for sale.

People in today's world will not be patient enough to go searching for properties. They prefer modern way of getting a good property. It can be achieved through the use of web enabled estate agent application. This web app can help in searching for the right property with great ease.

ACKNOWLEDGEMENT

We would like to express our special thanks and gratitude to our Institute, **Vidyavardhini's College of Engineering and Technology**, our principal **Dr. H.V. Vankundre**, our Head of Department **Dr. Megha Trivedi** and our Project Guide **Prof. Sunil Katkar** who gave us this valuable opportunity to develop this mini project on the topic : Real Estate Management System. This project has greatly helped us in expanding our core of knowledge in Web Development . It has provided us a precious opportunity to take a hands-on experience and showcase our Web Development Skills. We are also thankful to each of us because everyone of us aided to complete this project in a limited frame of time.

1 INTRODUCTION

1.1 INTRODUCTION

- Real Estate Management System is a fully fledged client end website where a client can rent/book a property.
- A new client will be able to register on this website but a user who has already registered cannot register again with the same email-id because the website also checks password while registering.
- Users can add their own property for selling/renting.
- Users can also search for any property as per their requirement.
- The website is a user friendly website.

1.2 PROBLEM STATEMENT AND OBJECTIVE

Problem Statement:

- In the recent days there has been observed a growth in Real Estate Sector due to lessening of Covid restrictions.
- Also many people are interested in purchasing or selling properties.
- But, finding a properly built and authentic real estate properties which are already well and fully furnished is quite tiresome and difficult these days.

Objectives :

- The objectives of the project include :
 1. To investigate user requirements for a real estate management system.
 2. To provide online platform via which investor can bid houses online .
 3. To provide management and administration of abc company to manage and monitor the entire business transactions process from a computer based interface .

1.3 SCOPE

- It provides a friendly GUI which proves to be best.
- It gives appropriate access to the authorized users.
- One can sell and buy property in the same website.

1.4 MINI PROJECT CONTRIBUTION

26_PRANAV MAURYA -

Collecting resource and information required for program & ppt.

Coding.

30_HARDIK NIKAM -

Arranging the allocated resources and providing finest idea for website.

Coding.

33_DREAM PATEL -

Analyzing, finding unique way for implementation & arrangement of resources in program.

Coding

42_JAY PRAJAPATI -

Designing the website according to Data.

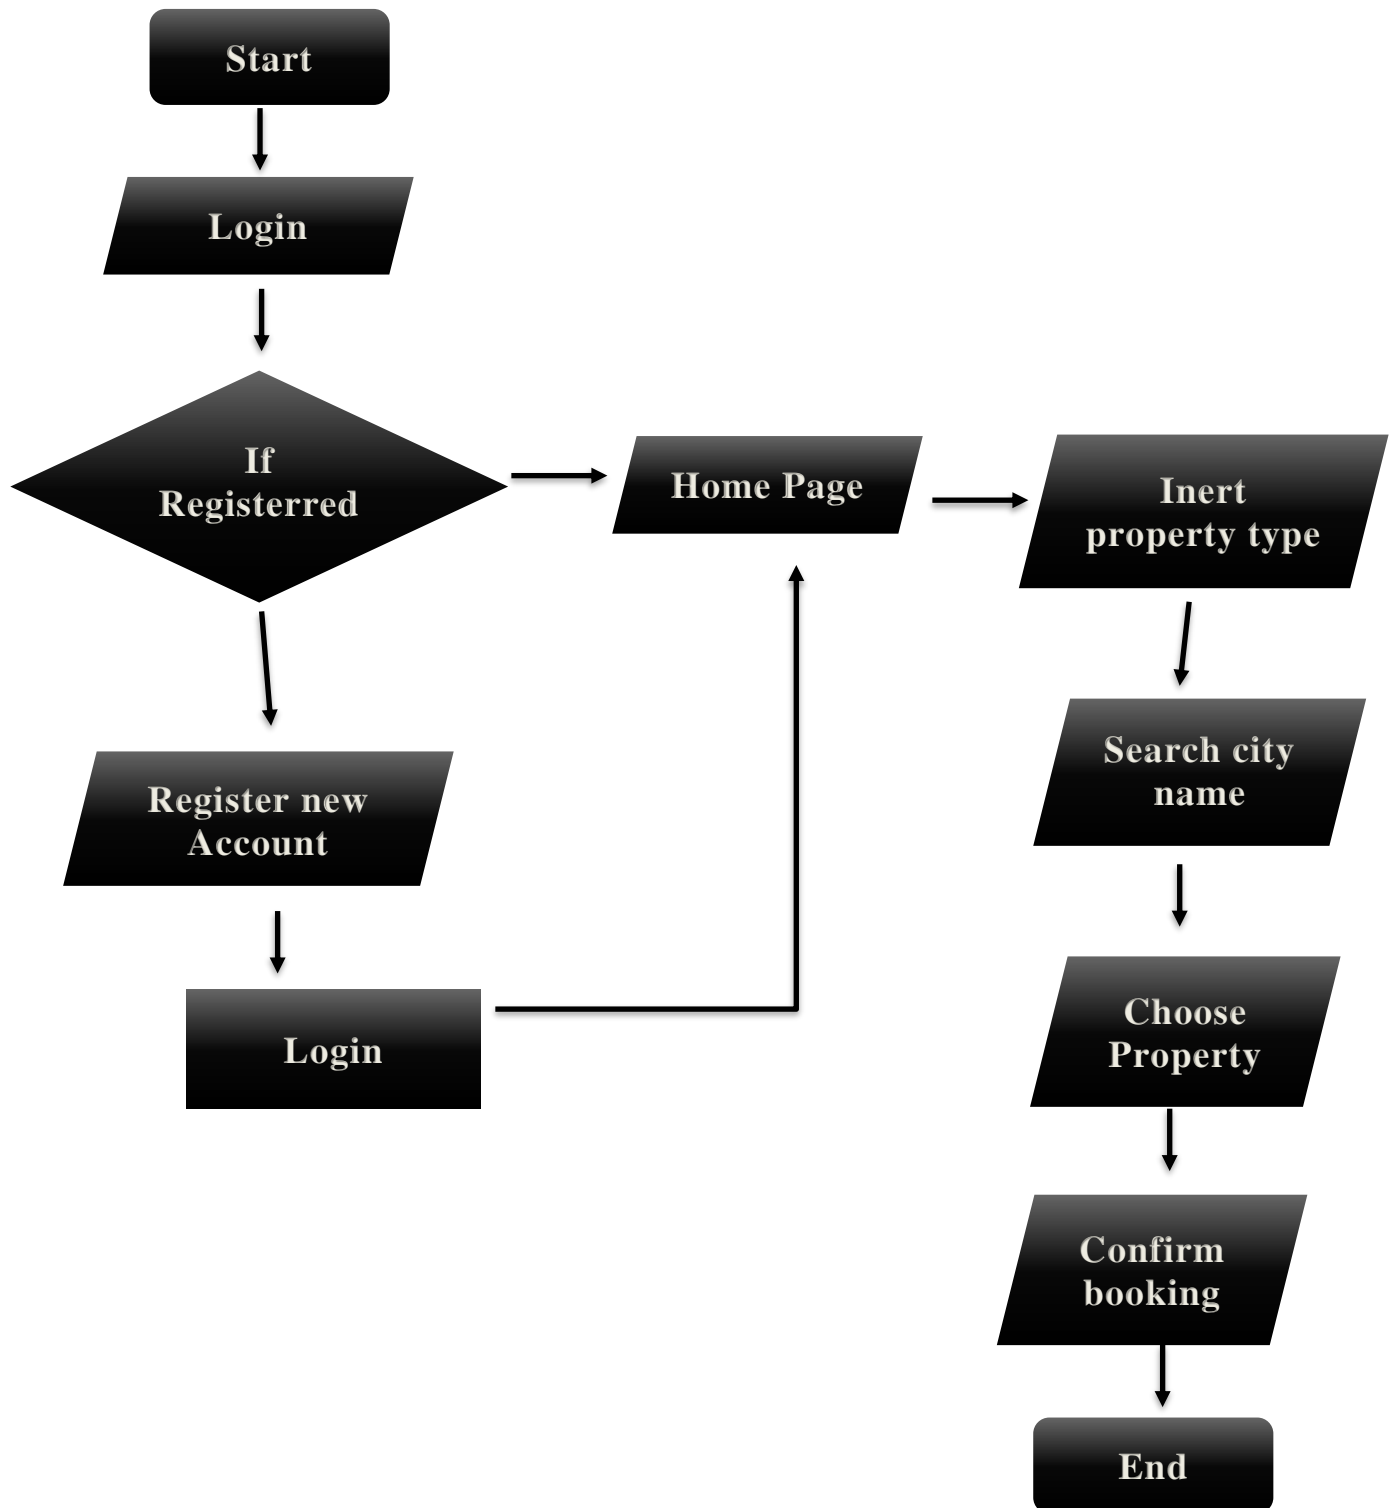

Coding

2 PROPOSED STATEMENT

2.4 Introduction

- The main aim of this project is to provide an online platform that ensures investors and potential clients to trade their properties as they need. Thus, making business to be more faster and cheaper.
- The website also provides an information about the price range of the Flats/Apartments/Villas,etc.
- The online real estate will increase chances for one to find a suitable place for both work and residential.
- The system also contains an EMI calculator which can help in calculating the EMI of the client for a particular property.

2.5 ARCHITECTURE/Framework/BLOCK DIAGRAM

2.6 ALGORITHM AND PROCESS DESIGN

Login module: In login module user can login only if he or she is registered.

Register module: Here new user can registered with his credentials and his profile photo.

Search module: Here user can search city name and the code searches the same name in database and fetches information accordingly.

Display module: Here we fetch an display all property details and display them.

Inserting property module: Here user can insert new property for selling or buying purpose on the website

Delete property module: Here user can delete his or her property from the database and the information is deleted from the database.

Emi calculator module: EMI calculator module calculates the EMI of client as per the amount of the property.

Booking module: The Booking Module books a property as preferred by the client , fetches the login data of the client from the database and displays the booking details. Booking status is stored in the database.

2.7 DETAILS OF HARDWARE AND SOFTWARE

- Windows 7 or above.
- Processor should be i3 or above for better performance.
- Minimum 4gb ram required to ren this program
- Pre-Installed XAMMP OR WAMP

2.8 EXPERIMENTS AND RESULTS FOR VALIDATION AND VERIFICATION

Code:

```
<?php
ini_set('session.cache_limiter','public');
session_cache_limiter(false);
session_start();
include("config.php");

?>

2.9 CONCLUSION AND FUTURE WORK

CONCLUSION

Our project Real Estate Management System intends to provide an online platform which involves buying, selling and renting of a property. When opened the website, the client can login to access the platform. Client can then search the property if wants to buy and can also upload the details of the property if wants to rent/sell a property. The project also involves feature in which a user can delete the property if required. The project also has an EMI calculator which calculates the EMI of the client according to the amount of the property.

FUTURE WORK

- Movers and Packers can be added.
- The website can be linked to Google Maps which will provide the direction of
- the location of the property searched.
- Integrating module for transaction of money.
